THE REPLY FILED 05 July 2005 FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE.
1. The reply was filed after a final rejection, but prior to or on the same day as filing a Notice of Appeal. To avoid abandonment of this application, applicant must timely file one of the following replies: (1) an amendment, affidavit, or other evidence, which places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 41.31; or (3) a Request for Continued Examination (RCE) in compliance with 37 CFR 1.114. ONLY CHECK BOX (b) WHEN THE FIRST REPLY WAS FILED WITHIN TWO
MONTHS OF THE FINAL REJECTION. See MPEP 706.07(f).

The date on which the petition under 37 CFR 1.136(a) and the appropriate extension fee have been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). REQUEST FOR RECONSIDERATION/OTHER 11. The request for reconsideration has been considered but does NOT place the application in condition for allowance because:
Applicant asserts that Chapman et al. fails to disclose a quidewire having approximately 78% titanium, 11.5% molybdenum, 6% zirconium and 4.5% tin by weight. However, the Examiner maintains that Chapman et al. does disclose such a quidewire. Additionally, Applicant points to Col. 17, lines 20 - 24 of Chapman et al. as a teaching that components other than components
made of the claimed alloy can be used in conjunction with the kit. However, the Examiner disagrees. At Col. 3, line 44 - Col. 4, line 19, Chapman et al. discloses self-tapping bone screws as being part of the kit and being formed of the claimed alloy.
The disclosure of "conventional screws" at Col. 17, lines 20 - 24 relates to the shape/style of bone screws which can be used to
replace the self-tapping bone screws disclosed by Chapman et al., and does not refer to the composition of the "conventional screws". The Examiner considers the "conventional screws" as disclosed by Chapman et al. to be formed of the claimed allow
in that Chapman et al. discloses all components of the kit as being formed of such (Col. 4, lines 16 - 18).
